

VCO 4X8 Virgin Bituminous Coal Activated Carbon

BakerCorp's VCO 4x8 granular activated carbon is made from a selected grade of bituminous coal. This carbon is ideal for emission control applications.

PHYSICAL PROPERTIES:

Carbon Tetrachloride Activity:	60% minimum
Bulk Density:	28 lbs / ft ³
Moisture Content (as packed):	4% maximum
Hardness (Ball Abrasion):	90% minimum
Mesh Size:	4x8

These specifications represent general parameters and are subject to change. Please consult with BakerCorp before processing with your applications.
